Onvia Vedo Wireless Alarm Systems is a full-featured home security platform that installs in minutes, and delivers years of dependable, secure protection. Its advanced wireless technology eliminates the hassle of running wires to detectors and sensors. This allows for quick and easy installation as well as flexible placement around the house.

Onvia Vedo Wireless Alarm Systems are perfect for the do-it-yourselfer. There are no wires to run, and the system programming is simple; which is not to say that wireless security systems are less effective or reliable than a hardwired system.

### Wireless Technology

Adopts wireless technology, the wireless alarm can save tremendous amounts of money and time on system installation. Without professional training, people can install the wireless alarm within 30 minutes. Wireless means no wires, no electrical leads, wire-stripping and circuit testing. Install the wireless alarm just need a few screws, now all the wireless sensors included with batteries and 3M command strips for mount installation.

### DIY Alarm

Now you can install the alarm system by yourself, no need to wait the security installer come and sign the monitoring contract with them. Our cost-effective DIY alarm systems provides the ultimate security protection for your home and business. The alarm communicates via radio signals, making it much easier to install than a hardwired alarm system which requires wires and drilling holes in house.

### Self-monitoring

No monthly contract, self-monitoring your home via your mobile phone. Now self-monitoring doesn't mean just make automatic dialers connection, when an alarm rings at your home. Our new alarm system could send text message (SMS) to your mobile phone numbers, the text message includes alarm types, alarm time, zone number information, user can know the alarm activation reason was a burglary or a fire and therefore to know exactly which zone was triggered.

### Backup Battery

You don't have to worry about power outage anymore. This system comes with a rechargeable battery that can power the system for up to 48 hour in case of power failure from the DC.

### GSM Function

After install this alarm system, user can connect it into telephone line, or get a valid SIM card from GSM service provider. It can setup 5 phone numbers for alarm receiving. When an alarm occurred, the alarm system can make phone call and send text message (SMS) to these numbers.

SMS + Alarm
